

## TOPIC: PERFORMING HYPOTHESIS TESTS: VARIANCE

### Hypothesis Tests for Variance

- ◆ Like proportions and means, we can use the same steps to perform a hypothesis test for variance:  $\sigma^2$ .

#### EXAMPLE

A cereal packaging line requires the fill-weight variance to be no greater than  $0.25 \text{ g}^2$ . A sample of 30 boxes is collected and yields a simple variance  $0.31 \text{ g}^2$ . Test if the population variance is greater than  $0.25 \text{ g}^2$  using  $\alpha = 0.10$ . Assume the fill-weights are normally distributed.

| Hypothesis Tests for Variance |   |
|-------------------------------|---|
| <b>1) Hyp</b>                 | $H_0: \sigma^2 = \underline{\hspace{10cm}}$ $H_a: \sigma^2 [\leq   >   \neq ] \underline{\hspace{10cm}}$  |
| <b>2) Test Stat</b>           | $\chi^2 = \frac{(n-1)s^2}{\sigma^2}$ $n = \underline{\hspace{2cm}}$ $s^2 = \underline{\hspace{2cm}}$<br>$\chi^2 = \underline{\hspace{2cm}}$                               |
| <b>3) P-Value</b>             |  $df = n - 1 = \underline{\hspace{2cm}}$<br>$P\text{-Value} = \underline{\hspace{2cm}}$ |
| <b>4) Conclusion</b>          | Because $P\text{-value} [\leq   >] \alpha$ , we [REJECT   FAIL TO REJECT] $H_0$ .<br>There is [ENOUGH   NOT ENOUGH] evidence to suggest...                                |
| <b>Criteria</b>               | Random Sample? <input type="checkbox"/> Data is Normally Distributed? <input type="checkbox"/>  |

#### PRACTICE

A machine produces ball bearings that are designed to have a diameter standard deviation of 0.04 mm, but an engineer suspects the variability has increased. A sample of 60 bearings shows a standard deviation of 0.052 mm. Perform a hypothesis test with  $\alpha = 0.01$  to test the claim. Should the line manager have the machine serviced?

## **TOPIC: PERFORMING HYPOTHESIS TESTS: VARIANCE**

### **EXAMPLE**

Data from previous years suggests that the final exam scores for a statistics course have a standard deviation of about 6.3 percentage points ( $\sigma^2 = 36.69$ ). After changing some instructional practices, the professor wondered if the variance in final exam scores changed for this semester, so they collected a random sample of 40 students, finding  $s = 5.9$ . Perform a hypothesis test to see if the final exam score variance has changed using  $\alpha = 0.10$ , and assume the exam scores are normally distributed.
