

TOPIC: EXPONENTS

Intro to Exponents

- ◆ When a number is multiplied by itself _____, it can be written using exponents.
 - ▶ The **base** is the number being _____ & the **exponent/power** is how many _____ the base is multiplied.

New

Exponent Notation

$$\underbrace{8 \cdot 8 \cdot 8 \cdot 8}_{\text{4 times}} = \quad \text{" } \underline{\hspace{1cm}} \text{ to the } \underline{\hspace{1cm}} \text{ power"}$$

_____ multiplied _____ times

$$\underbrace{b \cdot b \cdot b \cdot \dots \cdot b}_{\text{... times}} = \quad \text{" } \underline{\hspace{1cm}} \text{ to the } \underline{\hspace{1cm}} \text{ power"}$$

_____ multiplied _____ times

(General Exponent Notation)

EXAMPLE

Find the value of each exponential expression by rewriting as a product.

(A)	7^2	"7 _____"
(B)	10^3	"10 _____"
(C)	2^5	

- ◆ A number with *NO* exponent implies an exponent of _____, $b = b^{\text{---}}$.

TOPIC: EXPONENTS

PRACTICE

Rewrite each product as an exponential expression.

$$3 \times 3 \times 3 \times 3 \times 3 \times 3 \times 3$$

PRACTICE

Evaluate the following.

(A) 13^1

(B) 7^3

(C) 2^8
